Speech therapy process with Verbal Praxls Rit

A to Z Auditory Rehabilitation Program Components

Psychological tests

ADHD Attention Deficit Hyperactivity Disorder Test

The Conners' Rating Scales - Revised (CRS-R): This is a parent, teacher, and self-report questionnaire that assesses a wide range of behaviors, including inattention, hyperactivity, impulsivity, and learning difficulties.

The Learning Disabilities Diagnostic Remedial System

(LDDRS) is a comprehensive assessment and intervention framework designed to identify and address specific learning difficulties in children. It encompasses a range of diagnostic tools and therapeutic approaches aimed at improving academic and developmental outcomes.

Vineland Adaptive Behavior Scales

The Vineland Adaptive Behavior Scales (VABS) is a standardized assessment tool used to measure adaptive behavior in individuals from birth to adulthood. It is commonly used to assess individuals with intellectual disabilities, autism spectrum disorder, and other developmental delay.

Psychological tests

Stanford-Binet Intelligence Scale

The Stanford-Binet Intelligence Scale is a standardized test designed to measure an individual's cognitive abilities and intelligence. It assesses various areas such as verbal reasoning, abstract/visual reasoning, quantitative reasoning, and short-term memory.

The Psycho Educational Profile Revised PEP-R

This is a comprehensive assessment tool used to evaluate the cognitive and adaptive functioning of children with autism spectrum disorder (ASD) and other developmental disabilities. It is designed to provide a comprehensive understanding of a child's strengths and weaknesses, and to guide the development of individualized education plans (IEPs).

The Childhood Autism Rating Scale (CARS)

The Childhood Autism Assessment Scale is a 15-item observational rating scale used to assess the presence and severity of autistic behaviors in children. It is designed to be administered by trained professionals, such as psychologists or pediatricians.

Sensory disorders tests and occupational therapy

(Sensory Processing Disorder - SPD)

This is a neurological condition that affects how the brain processes information from the senses. This can lead to difficulties with interpreting and responding to sensory input from the environment, which can manifest in a variety of ways.

The Visual-Motor Integration Test (VMI)

This is a standardized assessment tool used to evaluate the integration of visual and motor skills in children. It assesses a child's ability to accurately copy geometric shapes and designs.

The VMI helps identify potential difficulties with:

- Visual perception: Recognizing and interpreting visual information
- Motor coordination: Fine motor skills, hand-eye coordination
- Visual-motor integration: Combining visual and motor skills for tasks like drawing and writing .The test results can help professionals identify children who may benefit from interventions to improve their visual-motor skills, such as occupational therapy.

Team

At Mawheba Rehabilitation Center, we are proud of our highly qualified and experienced team of specialists in assessment, diagnosis, behaviour modification, speech therapy, occupational therapy, and special education. Our team is dedicated to providing the highest quality services to achieve significant progress in children's lives and meet their unique individual needs.

Psychological Assessment Team

Comprised of qualified psychologists with extensive experience in diagnosing, evaluating, and treating various childhood disorders, the team conducts thorough assessments and develops individualized treatment plans tailored to each child's specific needs.

Occupational Therapy Team

Comprises a group of skilled occupational therapists who assist children in developing fine motor skills, enhancing motor coordination, and achieving independence in daily activities.

Speech and Language Therapy Team

Includes experts specializing in the diagnosis and treatment of speech and language delays in children experiencing delayed speech or speech difficulties. The team utilizes the latest tools and techniques to achieve optimal therapeutic outcomes.

Special Education Team

Consists of experienced specialists in designing individualized education plans that address the unique educational needs of each child. The team works to foster academic, social, and cognitive growth in children through the implementation of innovative educational strategies.
